UNIVERSAL HYMN

I wonder if ever a song were sung
But the singer's heart sang sweetest;
I wonder if ever a rhyme was rung
But the thought surpassed the meter;
I wonder if ever a sculptor wrought
Till the cold stone echoed his ardent thought!
Or if ever a painter, with light and shade,
The dream of his inmost heart portrayed!

TOURIST TRAFFIC

Each year more stress is being brought to bear on the value and importance of the tourist trade. A department has been set up this year by the Federal Govt called the Canada Travel Bureau with the laudable purpose of advertising extensively the many attractions of Canada, both from a scenic and sport point of view and also the many lucrative openings available for people with vision, purpose and perseverance.

This is all very admirable and we highly commend the men developing the project but there is one very important factor that could and should be rectified.

The summer over and vacationists returning from their respective wanderings by motor, we have listened silently to the various stories told and comparisons made with treatment received at the different auto camps visited.

We are loyal Canadians and have at with others just as loyal while they related and compared the courteous treatment extended by the camps across the line to that of Can-

Kedding Strathmore.

adian Camps and it is sad to relate, quite to the discredit of Canadian Auto Camps, both as to courtesy, service and cost.

Now it is time to admit this, but facts are facts. Had it been the possession of one or two parties only, we would have felt that it was merely an occasional condition of the situation, bad news or so forth. But unfortunately it seems the impression of the majority and so the more regrettable.

Canadians are not lacking nor unkind of the charm of kindly courtesy, everywhere on all occasions; in very truth a kindly word and similar deed goes far to brighten up a world that would otherwise at times be dull and grey. And so the moral of this story, a hint to the wise being sufficient, with the Canada Travel Bureau inaugurating their extensive campaign of advertising the beauties of Canada, they also set up a system of rules of courteous treatment on the part of Auto Camp Service—Men and so bring to an end the comparisons between American and Canadian Auto Camp which hitherto have been to the discredit of Canada.

THE MORRO CASTLE

The investigation being conducted to ascertain the cause of the disaster to the Morro Castle reveals a shockingly deplorable condition of affairs. It is these are found to be the true tragedy of the loss of the ship with its consequent death loss, somewhat before the condition of a living death, that also seems all too general.

This can be done with advantage by delivering grain in wagon lots or car lots to

LETHBRIDGE EXPERIMENTAL STATION WEEKLY LETTER

Building an Earth Dam for a Farm
Reservoir on the Prairies.

A water reservoir affords a feasible means of storing water that ordinarily runs off the land on many prairie farms each year and since the dam is a main part of the reservoir, your writer is devoting this week's letter to the building of an earth dam recommended for ordinary farm use.

The spillway is an important part of the reservoir that it should be given first consideration. It is usually made by digging a ditch around and some distance away from one end of the dam. The purpose of the spillway is to carry away any water, especially in time of flood, that cannot be held in the reservoir and it is therefore important to make the spillway ditch with plenty of width and the bottom of it should be at least three feet below the top of the dam. This will provide ample freeboard and prevent the water from running over the top of the dam. Many earth dams have been washed out through lack of adequate spillway facilities.

An earth dam should measure 8 ft. across the top when finished and its bottom width should be five times the height of the dam plus the top width of 8 feet. This provides for a 3 to 1 slope on the water side and the dam and 2 to 1 slope on the dry side. The water side is made with more slope to give extra protection against wash out.

The water slope of the dam needs to be protected against wave action excepting where the reservoir is very small. Rock riprap is best if properly laid, but where not available, a cover of straw, sea brush, willow, weeds or such material serves very well. Wire netting with posts driven into the earth slope or heavy brush may be used to hold the river material in place.
